

Client:- Apex Systems

End Client:- Delta Dental of Michigan

Position:- SAS Programmer

Location:- Okemos, MI (Hybrid - 2 Days Onsite/Week)

Type of Hire:- contract to hire (6-12 Months)

Top 3 Requirements:

- 5+ years of advanced knowledge of SAS programming – Needs to be a true senior resource
- 3+ years of experience with SQL, okay with other relational databases too but must have the SQL
- BI Development

What will win?

- Data warehousing- know how to use it, creating ETL, data architecting, team will be transitioning to this work later on.
- Previous experience with an On-Call work structure.

Project Scope: DDMI is doing a lot of org structures as it pertains to their approaches to reporting. Will be supporting several homegrown reporting platforms. A lot of the work is making sure the app is up and running and making sure when they are on-call to respond in a timely fashion to address any issues with their app.

Team Size & Environment Breakdown:

- 6 members – 4 Developers and 2 SQL Analysts
- 2 week Agile sprints
- Will be bringing in cloud technologies in the future but they are not sure when that will be, cloud is not required for the role. This person will not be a part of a larger cross-functional team, they will be working primarily on Stacy's Data Insights Team.

High-Level Individual Duties:

- This person will create Excel and PDF reports using Base SAS as described by business requirements documents and test system components as needed.
- Support several reporting platforms
 - Help with releases and on-call support for the applications (1 release every 6 weeks)
 - Participate in requirements and design sessions
 - develop and implement new system components or fixes to resolve system defects using business intelligence software and related tools
- Sets up and execute component tests as well as tracks and document system defects
